

A S NANDANUNNI

+91 9188750806 | asnqln@gmail.com | github.com/nan-dan-unni | linkedin.com/in/nan-dan-unni

SKILLS

Languages:	JavaScript, TypeScript, Python, Go, Rust
Frontend:	React.js, shadcn/ui, Radix UI, Tailwind CSS, Zustand, Chart.js, React Flow, SCSS, Vite
Backend:	RESTful APIs, Node.js (NestJS, Loopback), Python (Flask, Django), Go (Gin)
Databases:	MongoDB, InfluxDB, PostgreSQL, Firebase, Convex, Amazon (S3, Timestream)
Cloud and DevOps:	GCP (Cloud Run, Cloud Tasks, Cloud Functions, Pub/Sub), Docker, CI/CD workflows
AI / ML:	OpenAI, Langchain, RAG, Pinecone, on-device ML, OpenRouter, Langfuse, ONNX
Soft skills:	Leadership, Code reviews, Agile Methodology, Problem Solving
Tools:	Git, Bit, Postman, Datadog, Jest, Playwright, Claude Code, Vercel, Flagsmith

PROFESSIONAL EXPERIENCE (3+ yrs)

Software Engineer at FenixPyre	2023 March - Present, 3+ years
Data security product, Startup - Frontend Lead & Backend Engineer	Remote (Ohio, US)

- Solo-designed and built a SIEM event collection platform across 9+ services in a microservice architecture, developing a TypeScript npm library, Go/Gin ingestion and cross-service correlation engine, and migrating event storage from InfluxDB to Amazon Timestream, closing a security gap by capturing failed and denied events, not just successes.
- Solo-designed and shipped an automated Egnyte token lifecycle management system using LoopBack, NestJS, and Google Cloud Tasks ahead of a hard vendor deadline, retaining 45% of customers and 10,000+ files with zero disruption.
- Owned the cloud dashboard frontend for a sensitive-file classifier at 2 million file scale, building the table view, configuration page, and analytics page with React, shadcn/ui, and Chart.js, and proposing a radix-tree-based folder explorer for memory-efficient rendering; the classifier became a customer magnet after launch.
- Proposed and validated ONNX as the runtime for an on-device ML model in Rust for that same classifier, then built its rule-matching post-processor and a format-specific file metadata labeling system so sensitivity labels travel with the file, keeping file content off the cloud entirely.
- Promoted to Frontend Lead in 2025 after leading the file sharing platform frontend team in 2024: owned PR and UI review across the team, mentored an intern building a Microsoft Outlook add-in, and served as the direct point of contact for the CTO and engineering manager.
- Built the frontend solo for an AI-powered file activity chatbot and led the backend's JavaScript-to-Python rewrite using LangChain, Pinecone, and GPT-4, increasing the maximum accepted file size by 200% and answer accuracy by 60%.

Software Engineer (Freelance) at Cura.so	2025 December - 2026 April, 4 months
AI front-desk platform for businesses, Startup - Frontend & Backend Engineer	Remote (Bangkok, Thailand)

- Built the core of an AI front-desk product as sole freelance engineer across frontend and backend: the unified multi-channel inbox, the AI agent's booking and escalation flow, and the customer-facing booking experience; the CEO praised the finished product as production-grade.
- Built the RAG pipeline and document upload UI grounding the AI agent's answers in business-specific data, using Convex, Vercel AI SDK, OpenRouter, and React.
- Designed and built a drag-and-drop AI workflow builder using React Flow from a loose spec, including AI-assisted natural-language workflow generation, which became a customer-attracting feature.

EDUCATION

B.Tech in Computer Science and Engineering	School of Engineering, CUSAT, Kochi, India
CGPA: 8.4, First Class with Distinction	2019 July - 2023 July

M.Tech in Artificial Intelligence and Data Science	Indian Institute of Information Technology, Kottayam, India
CGPA: 7.2	2024 August - 2027 August
